

MATERIALS INVESTIGATORS - SURFACE WETTING

Put a droplet of liquid on different surfaces and describe what happens

Liquid:

What surface did you put the liquid on?	What did the droplet look like? Is it narrow and high? Is it spread out and thin?	What does the surface look like through a magnifying lens?

It would be great to see how you have got on so please ask an adult to scan or send a photo of your completed sheet to info@discovermaterials.uk. Use 'Materials Investigators – Surface Wetting' as the subject title.
